

Products & Services

NEW EQUIPMENT

- All types of pumping equipment, centrifugal and positive displacement.
- Quality, reliable products from well recognized brand name manufacturers.
- Expert equipment selection tailored to your application requirements.

REPLACEMENT PARTS

- Replacement parts for all types of pumps.
- Only top quality OEM and aftermarket repair parts in a variety of materials.
- All types of shaft seals; mechanical, lip, dynamic and packing.

ACCESSORY ITEMS

- Full line of accessory items to complete your installation; valves, pipe connectors, pulsation dampeners, gauges, strainers, motors, control panels, level controls, adjustable speed drives, etc.

REPAIR SERVICE

- Professional rotating equipment repair and component refurbishing.
- Repairs to all pump types and sizes.

SPECIALTY SERVICES

- Laser shaft alignment.
- Pump performance and hydrostatic testing.
- Motor electrical fitness testing.
- Field commissioning, inspection, alignment and repair of equipment.
- Vibration analysis and trending.
- Product training and educational seminars.

ALL-FLO

Complete line of air-operated double diaphragm pumps in both metallic and non-metallic construction with a variety of elastomers and porting arrangements, supported with an extensive assortment of accessories.

AMPCO

Centrifugal and rotary lobe pumps for the food processing, marine and industrial sectors. Available in cast iron and other cast and wrought specialty alloys.

AMT

Extensive line of industrial and commercial duty standard, self-priming, vertical and submersible centrifugal, gear and diaphragm pumps in both electric and engine driven configurations.

BJM

Heavy duty and general service submersible pumps for clean, solids laden, corrosive and abrasive services. Available with flanged, threaded and hose barb connections in a variety of material combinations with various control and installation accessories.

BLACKMER GEAR

Complete line of process duty sealless magnetic drive internal rotary gear pumps suitable for use in a wide array of applications, available in a variety of materials and configurations.

CORNELL

Heavy duty centrifugal pumps for food transport, waste fluids, slurries and general water services. Construction in cast iron, hard iron and stainless alloys in various drive configurations.

EBARA

Stainless steel end-suction, multi-stage horizontal, multi-stage vertical, self-priming and submersible pumps with both threaded and flanged connections. Also a broad range of clean and solids handling cast iron submersible pumps and accessories.

GORMAN-RUPP

Full line of self-priming, standard end-suction, engine driven and submersible type pumps for use with clean, corrosive, solids laden and abrasive fluids. Available in a variety of construction materials and drive configurations.

ITT INDUSTRIES

- Goulds Pumps
- ProSmart
- PumpSmart
- ProCast

ITT Industries **Goulds** Pumps division offers a complete line of pumping equipment for use in handling every type of fluid with end-suction, double suction, multi-stage, magnetic drive, vertical and axial flow designs. ITT Industries Monitoring and Controls division offers **PumpSmart** advanced VFD's specifically designed for controlling centrifugal pumps and the **i-Alert** Bluetooth enabled condition monitor. The **ProCast** division offers OEM quality aftermarket pump replacement parts for use in many popular brands of pumps.

LIBERTY

Progressing cavity type positive displacement pumps in iron and stainless construction for use with viscous products, waste fluids and slurries. Available in a variety of drive configurations.

MEGGA

Commercial duty cast iron horizontal end-suction centrifugal pumps in both close-coupled and frame mounted configuration. Product utilizes industry standard mechanical seals and motors for simple and economical maintenance.

MTH

Single and multi-stage regenerative turbine and centrifugal type pumps in close-coupled and frame mounted configurations in both sealed and canned motor designs. Available in iron, bronze and stainless steel materials of construction.

NATIONAL

Heavy duty vertical turbine pumps in a variety of materials and configurations. High efficiency hydraulic designs are combined with quality features to extend service life and reliability.

PROMINENT

Full line of chemical metering pumps as well as standard and engineered dosing systems. Extensive array of related accessories for chemical dosing, monitoring, control and storage.

SEALING PRODUCTS

TOM-PAC line of high performance shaft packing compounds and advanced lubrication products. **AST** single and double mechanical shaft seals for centrifugal and positive displacement pumps.

STANDARD

Drum and tote transfer pumps and accessories in a variety of materials and drive arrangements.

VERTIFLO

Full line of vertical, horizontal and self-priming industrial duty centrifugal pumps in a variety of materials and drive configurations.

VIKING

Complete line of rotary gear type pumps in a variety of materials and drive configurations. Sealed and sealless designs for use in a vast array of applications.

VOGELSANG

Extensive line of industrial elastomeric rotary lobe and progressing cavity type pumps as well as solids reduction/maceration equipment for industrial applications.
